

Acoustic ceilings designed for people and planet

Rebound acoustic ceiling panels are made from mycelium and residual plant fibers. An innovative biomaterial that brings together functionality, aesthetics, and responsible material use.

The acoustic ceilings are made from the same natural biomaterial, while each surface offers its own distinctive visual character.

From calm, uniform finishes to expressive textures with visible plant fibres, the collection allows architects and designers to create a wide range of spatial atmospheres and architectural expressions.

Dimensions

- 1200 × 600 × 30 mm

Variations

- Pure
- Nature
- Fiber
