

Rebound™

TILE Acoustic Panel

Acoustic interior grown from waste

TILE are made from mycelium and residual plant fibers, designed to make the best possible use of our materials. It gives new purpose to panels grown in sizes that are not suited for our other applications.

The individual tiles are produced in fixed dimensions based on the size of the panels, allowing us to use the material efficiently and minimize waste.

TILE is available in our three standard surfaces: Pure, Fiber and Nature.

Flexible installation

- With or without a frame
- Can be combined to create larger surfaces.

Individual tiles

Create your own composition with individual tiles in varying lengths and natural color variations.

Dimensions

- 600 × 1200 mm
- 800 × 1200 mm
